

Helping you manage
skin prone to
eczema

Spectro EczemaCare[®]

What is eczema?

Eczema is one of a group of skin conditions that cause intense dry, red and itchy skin. Everyone has a skin barrier, the top layer of skin that keeps in moisture and keeps out chemicals, dirt and bacteria. Children and adults who suffer from eczema have a skin barrier that is easily damaged. When the skin barrier is disturbed, microscopic cracks develop allowing precious water to escape and dirt, bacteria and cosmetics to enter and irritate sensitive skin. Skin feels dry, tight and rough and the itch-scratch cycle begins.

Scratching makes it worse!

The primary complaint of eczema sufferers is itchiness, which often leads to excessive scratching. The inflammatory response to scratching causes the itch-scratch cycle. The more you itch, the more you scratch, the itchier it gets.
